

Question

Write a Python function to calculate the factorial of a number.

Code

```
def fact(n):  
    f=1  
    for i in range(1,n+1):  
        f=f*i  
    print(f)  
fact(7)
```

Input

No input required (the number 7 is passed directly to the function).

Output

5040
