

Question

Write a Python function to check if a number is prime or not.

Code

```
x=15
for i in range(2,x):
    if x%i==0:
        print("it's not prime")
        break
else:
    print("it's prime")
```

Input

No input required (the number is defined in the program).

Output

it's not prime
